Discussed conceptual site model and moving contaminated dirt to a central covered, armored location for temporary storage.

NRC says that if EPA doesn't plan on permanent on-site disposal, no NRC permit would be needed. We would do the work under FMRI's license.

Consider work an ALARA (As Low as Reasonably Achievable) action to reduce threat, stabilize site, and prevent further dispersion.

May need a MOU between EPA and NRC for action or more likely, an exchange of letters from management. From EPA stating what we plan to do and from NRC saying conditions to do those things.

Review current MOU, Fansteel license

Next step: share conceptual plan with NRC.
